

Project EARTH  
*Forest to the Sea in a changing climate*

---

World-renowned marine environmental artist Wyland, the National Oceanic and Atmospheric Administration's (NOAA) Office of National Marine Sanctuaries, and the U.S. Forest Service (USFS) are teaming up to raise awareness of water issues in our changing climate. This new partnership and educational campaign, entitled "Project EARTH", will bridge the worlds of art and science to inspire people of all ages to become better stewards of our precious water resources.

As part of "Project EARTH" and the Forest to the Sea partnership, the Wyland Foundation, NOAA, and USFS will be creating proactive, highly visible, interactive opportunities to educate the public about the importance and interconnectivity of water in this changing climate from the mountain forests and rangelands all the way to the ocean. The partnership will combine a nationwide environmental mural campaign, public events, educational materials, presentations by experts from USFS and NOAA, interactive mazes, and a state of the art mobile learning center.

- Find out how this program brings together the latest information and cutting edge presentational materials in one of the most engaging, accessible programs available today.
- Hear from USFS and NOAA about how climate change will affect our planet's water resources and why protecting natural areas are essential steps to preserving those resources. The Wyland Foundation will also discuss how art is such a valuable tool to communicate with, inspire, and engage the public to create positive change and ensure resource preservation.
- Explore the state of the art mobile learning center on-site.
- Discover how your zoo or aquarium can become involved in this unique campaign!
